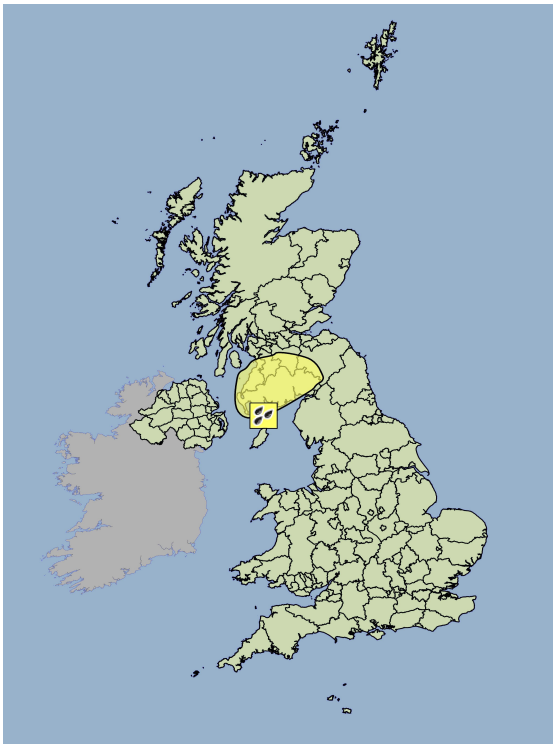
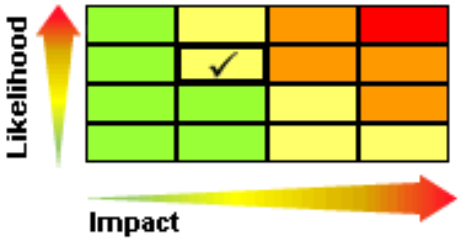
National Severe Weather Warning Service





Chief Forecasters Assessment
An active cold front is expected to move southeast across the region during Friday, bringing spells of heavy and persistent rain, especially over high ground. At this stage, rainfall amounts are uncertain. Given recent significant rainfall events, the area is more sensitive, so that fairly modest rainfall amounts could lead to further localised flooding. We expect to update this warning during the coming days as more information becomes available.

The Met Office have issued a **Yellow Alert** of **Rain**

Valid from **06:00 on Fri, 05th Feb 2016** until **23:55 on Fri, 05th Feb 2016**

Further spells of heavy rain are possible during Friday, particularly over the high ground of Dumfries and Galloway.

Be aware that due to the saturated ground, further localised flooding and disruption to travel is possible.
